Project Synopsis

- ❑ *Shed 12 x30, 5.5 m under eaves, with a 15 degree pitch roof.*
- ❑ *Internal floor burnished finish*
- ❑ *2500m2 of external concrete*
- ❑ *All associated earthworks and preparation*
- ❑ *Bird proof shed*
- ❑ *Associated storm water and connection*

Shed Erection

Customer: Seed Distributors Virginia
South Australia

April 2008

Stokcrete have erected a number of sheds and the associated concrete works. On this project we installed 2 concrete precast water tanks made in sections. The tanks hold 18,000 litres and precast in 4 sections 3 metres in diameter.

The benefits of building tanks this way are:

- ❑ Cost
- ❑ Speed of installation
- ❑ Components can be manufactured off site
- ❑ Minimal staff required for construction

The shed and associated storm water was also part of the scope of this project.
