Project Synopsis

- ❑ Each tank hold 1800 litres
- ❑ 3 metre in diameter
- ❑ Approximately 3 metres high

Tank Construction

Customer: Seed Distributors Virginia
South Australia

May 2008

Stokcrete have erected a number of sheds and the associated concrete works. On this project we installed 2 concrete precast water tanks made in sections. The tanks hold 18,000 litres and precast in 4 sections 3 metres in diameter.

The benefits of building tanks this way are:

- ❑ Cost
- ❑ Speed of installation
- ❑ Components can be manufactured off site
- ❑ Minimal staff required for construction

The shed and associated storm water was also part of the scope of this project.
